

Hands On Valve and Actuation Training

At CSN Solutions our training department teaches you the basic as well as the tricks and secrets that other companies won't reveal. As a student at one of our classes you will receive a binder full of procedures and breakdowns of valves and actuators. The student will also disassemble and reassemble smaller valves and actuators in the class. We will teach the student the proper amount of grease to inject and which lubrication equipment that should be used. Finally, the last part of the training is the Hands-On Session. Students will take what we have learned in class and apply it to their own valves and actuators at their location.

Call us today to schedule a class at your location.
